Summary
This course covers topics in applied biostatistics, with an emphasis on practical aspects of data analysis using R statistical software. Topics include types of studies and their design and analysis, high dimensional data analysis (genetic/genomic) and other topics as time and interest permit.

Content
• Types of studies
• Design and analysis of studies
• R statistical software
• Reproducible research techniques and tools
• Report writing
• Exploratory data analysis
• Linear modeling (regression, anova)
• Generalized linear modeling (logistic, Poission)
• Survival analysis
• Discrete data analysis
• Meta-analysis
• High dimensional data analysis (genetics/genomics applications)
• Additional topics as time and interest permit

Keywords
Data analysis, reproducible research, statistical methods, R, biostatistical data analysis, statistical data analysis

Learning Prerequisites

Required courses
This course will be very difficult for students with no previous course or experience with statistics. **Previous experience with R is neither assumed nor required.**

Recommended courses
Undergraduate statistics course

Important concepts to start the course
It is useful to review statistical hypothesis testing.

**Learning Outcomes**

By the end of the course, the student must be able to:

- Interpret analysis results
- Justify analysis plan
- Plan analysis for a given dataset
- Analyze various types of biostatistical data
- Synthesize analysis into a written report
- Report plan of analysis and results obtained

**Transversal skills**

- Write a scientific or technical report.
- Assess one's own level of skill acquisition, and plan their on-going learning goals.
- Take feedback (critique) and respond in an appropriate manner.
- Use a work methodology appropriate to the task.

**Teaching methods**

Lectures and practical exercises using R. Typically, each week covers an analysis method in the lecture and then the corresponding exercise session consists of an R proactical showing how to implement the methods using R. In each practical, students use R to carry out analyses of the relevant data type for that week.

**Expected student activities**

Students are expected to participate in their learning by attending lectures and practical exercise sessions, posing questions, proposing topics of interest, peer reviewing of preliminary reports, and interacting with teaching staff regarding their understanding of course material. In addition, there will be a number of short activities in class aimed at improving English for report writing.

**Assessment methods**

Evaluation is based on written reports of projects analyzing biostatistical data.
