Summary
With this course, the student will learn advanced methods in transmission electron microscopy, especially what is the electron optical setup involved in the acquisition, and how to interpret the data. After the course, students will be able to understand and assess TEM encountered in papers.

Content
1. Electron imaging and diffraction contrasts
2. Phase contrast
3. Scanning TEM
4. EDS-, EEL-spectroscopy in TEM.
Exercises and demonstrations concerning these themes.

Learning Prerequisites
Required courses
- Electron microscopy: introduction
- Basic knowledge of Solid state physics, Crystallography, Crystal defects

Learning Outcomes
By the end of the course, the student must be able to:
• Choose the appropriate TEM technique adapted to their problems
• Recognize The TEM techniques used in a publication
• Interpret TEM images
• Present the TEM results

Teaching methods
Seven weeks of the course will be with MOOCS, 7 weeks with conventional format, alternating over the semestre. The weeks with MOOCS format, there will be time reserved at the microscope(s) to discuss and practice on the TEM the content of the lecture, as well as to answer student's questions.

Expected student activities
Follow the MOOCS *before* attending the TEM session for the 7 weeks on MOOCS format.

Assessment methods
Oral examination
