Remarque
Cours donné en alternance sur deux ans (donné en 2019-20)

Summary
In the decades from 1930 to 1950, many rank-based statistics were introduced. These methods were received with much interest, because they worked under weak conditions. Starting in the late 1950, a theory of robustness was added. The course gives an overview of these two approaches to data analysis.

Content
I. Robust Statistics
   • Global and local robustness indicators: Breakdown point, influence function
   • Hampel’s lemma
   • Huber’s theory: M-estimators, L-estimators
   • Robust tests
   • Robust regression

II. Linear Rank Tests
   • Test of Mann-Whitney-Wilcoxon and general linear rank tests: asymptotic theory, R-estimators
   • Rank correlations
   • U-statistics
   • Comparison of tests: Pitman efficacy
   • Permutation tests

III. Estimation of smooth functions
   • Curve fitting: polynomial regression, splines
   • Smoothing: non parametric estimation, degree of smoothness, bias vs. variance, penalization
   • Kernel estimators: definition, properties
   • Smoothing splines
   • Local regression
   • Wavelets

Learning Prerequisites
Required courses
Introduction to Probability, Introduction to Statistics

Learning Outcomes
By the end of the course, the student must be able to:
- Expound the content of the course.
- Apply the statistical methods explained in the course.
- Sketch the proofs of the theoretical results given in the course.
- Choose the appropriate robust or non-parametric methods for a given data analysis problem.
- Differentiate between robust and non-parametric methods.
- Generalize the tools treated in the course to other problems.
- Apply spline and kernel smoothers.
- Apply M-estimations in a variety of situations.

Transversal skills
- Assess one’s own level of skill acquisition, and plan their on-going learning goals.
- Manage priorities.

Teaching methods
Ex cathedra lecture and exercises in the classroom

Expected student activities
Do all the exercises. Prepare each week for the course. Participate actively in the course.

Assessment methods
Oral exam.

Resources
Bibliography
Introduction to the theory of nonparametric statistics by R.H. Randles and D.A. Wolfe, Wiley.
All of nonparametric statistics by L. Wasserman, Springer.

Ressources en bibliothèque
