COM-208  

Computer networks

Argyraki Katerina

Summary
This course provides an introduction to computer networks. It describes the principles that underly modern network operation and illustrates them using the Internet as an example.

Content
• Overview of Internet operation (main components and protocols).
• Application layer (web, cookies, ads, email, peer to peer).
• Socket programming (how to write a very simple network application).
• Transport layer (UDP, TCP, congestion control).
• Network layer (IP forwarding and basic routing).
• Data link layer (switching and basic shared access protocols).
• Security (secure email, SSL, IPsec).

Keywords
• Computer networks
• Internet
• HTTP
• Peer-to-peer networks
• Sockets, TCP/IP, congestion control, routing, switching, network security.

Learning Prerequisites

Required courses
• CS 106 - Introduction to programming
• COM 101 - Information sciences

Learning Outcomes
By the end of the course, the student must be able to:
• Design simple network applications.
• Choose which functions to implement at each network layer.
• Compare different network protocols.
• Perform simple network troubleshooting.
• Use simple network monitoring tools.
• Implement simple client-server applications.
• Investigate simple network attacks.
• Explain how basic Internet applications work.
• Explain how TCP/IP works.

Teaching methods
• Lectures
• Reading assignments
• Homework problems
• Hands-on exercises

Expected student activities
The students are expected to:
• attend the lectures
• read the assigned book sections
• complete homework problems
• complete hands-on exercises.

Assessment methods
• Quizzes and short essay (bonus points that can contribute up to 10% of the grade).
• Midterm exam (40% of the grade).
• Final exam (60% of the grade).

Supervision
Office hours Yes
Assistants Yes
Forum No
