Summary

In the lectures you will learn and understand the main ideas that underlie and the way networks are built and run. You will be able to apply the concepts to the smart grid. In the labs you will exercise practical configurations.

Content

LECTURES: 1. The TCP/IP architecture 2. Layer 2 networking; Bridging; the Spanning Tree Protocol. Bellman Ford. 3. The Internet protocol versions 4 and 6 4. The transport layer, TCP, UDP, sockets 5. Distance vector, link state routing. Optimality of routing. Interdomain routing, BGP. 6. Congestion control principles. Application to the Internet. The fairness of TCP. Flow based networking. Reservations for quality of service. 7. Hybrid constructions and tunnels, MPLS, VPNs. VPNs. 8. Selected advanced topic.

Computer Networks

Learning Prerequisites

Required courses

A first programming course

Learning Outcomes

By the end of the course, the student must be able to:
- Run and configure networks
- Understand the main ideas that underlie the Internet
- Write simple communicating programs
- Use communication primitives for internet applications or in the smart grid

Transversal skills

- Access and evaluate appropriate sources of information.
- Continue to work through difficulties or initial failure to find optimal solutions.

Teaching methods

Lectures with clickers
Labs on student's computer and in the Internet Engineering Workshop

Expected student activities

Participate in lectures
Participate in graded clicker test every other week
Make one lab assignment every other week, including handing in a written report
Optional: research exercise: gather information about a specific topic and explain it to class

Assessment methods

Theory grade = max(40% clicker test + 60% final exam, final exam)
Practice grade = average of labs
Final grade = harmonic mean of theory grade and practice grade.
The research exercice may give a bonus of at most 0.5 points in 1-6 scale.

Supervision

Office hours	Yes
Assistants	Yes
Forum	Yes
