MICRO-562 **Biomicroscopy II**

Altug Hatice, Seitz Arne

Cursus	Sem.	Type
Bioengineering	MA1, MA2, MA3, MA4	Opt.
Biomedical technologies minor	E, H	Opt.
Computational Neurosciences minor	H	Obl.
Computational Neurosciences minor	E	Opt.
Electrical and Electronical Engineering	MA1, MA2, MA3, MA4	Opt.
Microtechnics	MA1, MA2, MA3, MA4	Opt.
Photonics		Obl.
Sciences du vivant	MA1, MA2, MA3, MA4	Opt.

Language of teaching	English
Credits	4
Session	Winter, Summer
Semester	Spring
Exam	During the semester
Workload	120h
Weeks	14
Hours	**4 weekly**
Courses	2 weekly
Exercises	1 weekly
Project	1 weekly
Number of positions	

Summary

Introduction to the different contrast methods in optical microscopy. Basic hands-on experience with optical microscopes. How to investigate biological samples? How to obtain high quality images?

Content

Dark field and phase contrast microscopy, molecular spectroscopy, optical coherence tomography, aberrations and image quality, deconvolution, advanced microscopy (multiphoton, super-resolution). Hands-on experience with wide field and confocal microscopes.

Keywords

Optical microscopy and tomography, fluorescence spectroscopy, aberrations.

Learning Prerequisites

Required courses

Advanced optics (MT) or Biomicroscopy I (SV).

Recommended courses

Analysis IV, Linear algebra, General physics III/IV.

Important concepts to start the course

Basic matrix calculations, Fourier transformation, electromagnetic waves, wide field and confocal microscopy.

Learning Outcomes

By the end of the course, the student must be able to:

- Choose an appropriate imaging method for investigating the biological sample of interest.
- Estimate the performance and limitations of optical microscopes.
- Sketch the essential elements of optical microscopes.
- Operate wide field and confocal microscopes.

Transversal skills

- Use a work methodology appropriate to the task.
- Continue to work through difficulties or initial failure to find optimal solutions.
- Communicate effectively with professionals from other disciplines.

Teaching methods

Lecturing with exercises (50%) and practice in the microscopy facility (50%).

Expected student activities

Following the lecturing and solving the exercises regularly is necessary for mastering the course contents. The solutions of the exercises are distributed at the next lecture. The student is invited to find his/her own solutions and to discuss them with the assistants. An active participation in the laboratory leads to the mastering of different microscopes.

Assessment methods

- Continuous evaluation with exams on theory and practice.
- Support: manuscript of 2 sheets A4 (recto-verso). No calculators.

Supervision

Office hours	No
Assistants	Yes
Forum	Yes
Others	Possible to take dates.
