

CS-455

**Topics in theoretical computer science**

Cursus	Sem.	Type
Computer science minor	H	Opt.
Computer science	MA1, MA3	Opt.
Cybersecurity	MA1	Opt.
Data Science	MA1, MA3	Opt.
SC master EPFL	MA1, MA3	Opt.

Language of teaching	English
Credits	4
Session	Winter
Semester	Fall
Exam	During the semester
Workload	120h
Weeks	14
<b>Hours</b>	<b>4 weekly</b>
Courses	3 weekly
Exercises	1 weekly
<b>Number of positions</b>	

**Remark**

pas donné en 2018-19

**Summary**

The students gain an in-depth knowledge of several current and emerging areas of theoretical computer science. The course familiarizes them with advanced techniques, and develop an understanding of fundamental questions that underlie some of the key problems of modern computer science.

**Content**

- Examples of topics to be covered include:
  - Streaming: given a large dataset as a stream, how can we approximate its basic properties using a very small memory footprint? Examples that we will cover include statistical problems such as estimating the number of distinct elements in a stream of data items, finding heavy hitters, frequency moments, as well as graphs problems;
  - Sketching and sampling: what can we learn about the input from a few carefully designed measurements (i.e. a 'sketch') of the input, or just a few samples of the input? We will cover results in sparse recovery and property testing that answer this question for several fundamental problems;
  - Sublinear runtime: which problems admit solutions that run faster than it takes to read the entire input? Examples include sublinear time algorithms for graph processing problems, nearest neighbor search and Sparse FFT;
  - Communication: how can we design algorithms for modern distributed computation models (e.g. MapReduce) that have low communication requirements? We will discuss graph sketching, a recently developed approach for designing low communication algorithms for processing dynamically changing graphs.

**Keywords**

streaming, sketching, sparse recovery, sublinear algorithms

**Learning Prerequisites****Required courses**

Bachelor courses on algorithms, complexity theory, and discrete mathematics.

**Learning Outcomes**

By the end of the course, the student must be able to:

- Design efficient algorithms for variations of problems discussed in class;
- Analyze formally space/time/communication complexity of randomized algorithms
- Prove space/time/communication lower bounds for variations of problems discussed in class;
- Select appropriately algorithmic tool for big data analysis problem at hand

### Teaching methods

Ex cathedra, homeworks, reading

### Expected student activities

Attendance at lectures, completing exercises, reading written material

### Assessment methods

- Continuous control

### Supervision

Office hours	Yes
Assistants	Yes
Others	Electronique forum : Yes

### Resources

#### Bibliography

There is no textbook for the course. Notes will be posted on the course website.

### Ressources en bibliothèque

- [Randomized Algorithms / Motwani](#)
