

ENV-400

Air pollution and climate change

Reimann Bhend Stefan, Takahama Satoshi

Cursus	Sem.	Type
Energy Management and Sustainability	MA2, MA4	Opt.
Energy Science and Technology	MA2	Opt.
Energy minor	E	Opt.
Environmental Sciences and Engineering	MA2, MA4	Opt.
Mineur STAS Russie	E	Opt.
Minor in Integrated Design, Architecture and Sustainability	E	Opt.

Language of teaching	English
Credits	5
Session	Summer
Semester	Spring
Exam	Written
Workload	150h
Weeks	14
Hours	3 weekly
Courses	2 weekly
Exercises	1 weekly
Number of positions	

Summary

A survey course describing the origins of air pollution and climate change

Content

- Atmospheric pollutants and their effects on the environment
- Emissions related to air pollution and climate change
- Measurements of air pollutants, greenhouse gases and meteorological conditions
- Air quality models
- Environmental regulations and abatement strategies related to air pollution and climate change

Keywords

Atmospheric chemistry, air quality, climate change, air pollution, meteorology, aerosols

Learning Prerequisites**Recommended courses**

Physics and Chemistry of the Atmosphere (ENV-320)

Important concepts to start the course

- Differential, integral, and vector calculus
- Linear algebra
- Chemistry (reaction rates, chemical thermodynamics)
- Basic programming concepts

Learning Outcomes

By the end of the course, the student must be able to:

- Identify compounds recognized as pollutants and regulated in various countries
- Categorize emission or production sources and removal mechanisms of various pollutants.
- Compare methods and practical issues concerning measurement of gas, particles, and meteorological variables.
- Describe challenges in modeling atmospheric pollution/climate change phenomena.

- Explain the dependence of air quality on emissions, meteorology, and atmospheric chemistry.
- Assess / Evaluate the impacts of human activity on air pollution and climate change.
- Describe potential mitigation strategies as possible solutions to air pollution/climate change problems.
- Interpret atmospheric observations

Transversal skills

- Access and evaluate appropriate sources of information.
- Plan and carry out activities in a way which makes optimal use of available time and other resources.
- Assess one's own level of skill acquisition, and plan their on-going learning goals.

Teaching methods

Lectures and exercises (quantitative and programming)

Expected student activities

Lecture attendance, exercise assignments

Assessment methods

30% exercise assignments, 70% final exam
