

ChE-304

**Energy systems engineering**

Luterbacher Jeremy, Smit Berend

Cursus	Sem.	Type
Chemical Engineering	BA6	Obl.
Energy Science and Technology	MA2	Opt.
HES - CGC	E	Obl.

Language of teaching	English
Credits	3
Session	Summer
Semester	Spring
Exam	During the semester
Workload	90h
Weeks	14
<b>Hours</b>	<b>3 weekly</b>
Courses	2 weekly
Exercises	1 weekly
<b>Number of positions</b>	

**Summary**

This course will provide a toolkit to students to understand and analyze sustainable energy systems. In addition, the main sustainable energy technologies will be introduced and their governing principles explained.

**Content****1. Basics of energy analysis**

- **Technical aspects of energy: Thermodynamics of energy conversion**
- **Systems modeling**

**2. Global energy analysis**

- **Energy: issues, definitions and resources**
- **Energy economics**

**3. Sustainable energy technologies (the technologies covered will vary year to year depending on guest lecturers)**

- **Energy Storage, management and distribution**
- **Fossil energy and carbon sequestration**
- **Geothermal energy**
- **Hydropower**
- **Wind energy**
- **Solar energy**
- **Biomass conversion and bioenergy**

**Learning Prerequisites**

**Required courses**

Thermodynamics, General Chemistry

**Recommended courses**

Introduction to Chemical Engineering I and II

**Learning Outcomes**

By the end of the course, the student must be able to:

- Analyze a renewable energy system
- Describe the working principles of the principle sustainable energy technologies
- Describe the main issues pertaining to the global energy supply
- Analyze the thermodynamics of a sustainable energy system
- Perform a simple systems analysis of a renewable energy system
- Analyze the economics of a sustainable energy system

**Teaching methods**

Course with examples, case studies and exercises

**Assessment methods**

Continuous: one in-class exam and a project to be turned in.
