Session	Summer
Semester	Spring
Exam	Written
Workload	120h
Weeks	14
Hours	4 weekly
Courses	1 weekly
Exercises	1 weekly
Project	2 weekly
Number of positions	

Summary

Introduction to the different contrast enhancing methods in optical microscopy. Basic hands-on experience with optical microscopes at EPFL's Biolmaging and Optics Facility. How to investigate biological samples? How to obtain high quality images?

Content

The course combines theory with hands-on experience to teach the basic principles of commonly used optical microscopy techniques including bright-field, dark-field, phase-contrast, DIC, polarization, fluorescence as well as introduce advanced techniques such as confocal, multi-photon, and super-resolution microscopy. The course also provides hands-on experience with wide field and confocal microscopes.

Keywords

Optical microscopy and tomography, fluorescence spectroscopy, aberrations.

Learning Prerequisites**Required courses**

Advanced optics (MT) or Biomicroscopy I (SV).

Recommended courses

Analysis IV, Linear algebra, General physics III/IV.

Important concepts to start the course

Basic matrix calculations, Fourier transformation, electromagnetic waves, wide field and confocal microscopy.

Learning Outcomes

By the end of the course, the student must be able to:

- Choose an appropriate imaging method for investigating the biological sample of interest.
- Estimate the performance and limitations of optical microscopes.
- Sketch the essential elements of optical microscopes.
- Operate wide field and confocal microscopes.
- Assess / Evaluate the operation principles of commonly used microscopy methods

Transversal skills

- Use a work methodology appropriate to the task.
- Continue to work through difficulties or initial failure to find optimal solutions.
- Communicate effectively with professionals from other disciplines.

Teaching methods

Lecturing with exercises (50%) and practice in the microscopy facility (50%).

Expected student activities

Following the lecturing and solving the exercises regularly is necessary for mastering the course contents. The solutions of the exercises are distributed at the next lecture. The student is invited to find his/her own solutions and to discuss them with the assistants. An active participation in the laboratory leads to the mastering of different microscopes.

Assessment methods

Written exam during the exam session

Supervision

Office hours	No
Assistants	Yes
Forum	Yes
Others	Possible to take dates.
