

EE-425

HF and VHF circuits and techniques I

Dehollain Catherine

Cursus	Sem.	Type
Electrical and Electronical Engineering	MA1, MA3	Opt.
MNIS	MA3	Opt.

Language of teaching	English
Credits	4
Session	Winter
Semester	Fall
Exam	Written
Workload	120h
Weeks	14
Hours	4 weekly
Courses	2 weekly
Exercises	2 weekly
Number of positions	

Summary

Master the design of circuits and systems at high frequency (HF) and very high frequency (VHF) (1 MHz-6GHz). This lecture is particularly oriented towards circuit aspects of modern communications systems.

Content

- 1) HF Passive Components
- 2) Resonant Circuits
- 3) Impedance Matching
- 4) HF Filters
- 5) Noise and Intermodulation
- 6) Modeling and Characterization of Transistors at HF
- 7) Design of HF Small-Signal Amplifiers

Keywords

HF and VHF wireless communication circuits
RF wireless communication circuits

Learning Prerequisites**Recommended courses**

Electronic circuits and systems I and II

Learning Outcomes

By the end of the course, the student must be able to:

- Design an electrical filter
- Model an amplifier
- Carry out the design of an impedance matching circuit
- Assess / Evaluate the noise figure of an amplifier
- Assess / Evaluate the quality factor of a passive impedance
- Assess / Evaluate the equivalent noise sources of an amplifier
- Assess / Evaluate the model of a transistor in HF and VHF
- Assess / Evaluate the properties of a resonant passive circuit

Transversal skills

- Access and evaluate appropriate sources of information.
- Assess one's own level of skill acquisition, and plan their on-going learning goals.
- Manage priorities.
- Set objectives and design an action plan to reach those objectives.
- Take feedback (critique) and respond in an appropriate manner.

Teaching methods

Ex cathedra and exercices

Assessment methods

Written

Supervision

Office hours	Yes
Assistants	Yes
Forum	No

Resources

Notes/Handbook

Polycopies and scientific articles.
