Summary

This course covers formal frameworks for causal inference. We focus on experimental designs, definitions of causal models, interpretation of causal parameters and estimation of causal effects.

Content

- Experimental design
 - Randomisation
 - Matched pairs, block designs, (fractional) factorial designs and latin squares
- Defining a causal model
 - Causal axioms
 - Falsifiability
 - Structural equations
 - Causal directed acyclic graphs
 - Single world intervention graphs
- Interpretation of causal parameters
 - Individual and average level effects
 - Mediation and path specific effects
 - Instrumental variables
 - Statistical inference: Estimands, estimators and estimates
 - Relation to classical statistical models
 - Doubly and multiply robust estimators

Keywords

Causality; Causal inference; Randomisation; Experimental design: Structural equation models; Causal Graphs; Estimands.

Learning Prerequisites**Required courses**

The students are expected to know the basics of statistical theory and probability theory. The courses “probability” (Math-230), “statistics” (Math-240) and “linear models” (Math-341).

Recommended courses

Courses in regression models and statistical inference.

Important concepts to start the course

Likelihood theory and principles of statistical testing. Experience with R is an advantage, but is not required.

Learning Outcomes

By the end of the course, the student must be able to:

- Design experiments that can answer causal questions
- Describe the fundamental theory of causal models
- Critique assess causal assumptions and axioms.
- Distinguish between interpretation, identification and estimation
- Describe when and how causal effects can be identified and estimated from non-experimental data.
- Estimate causal parameters from observational data.

Transversal skills

- Demonstrate the capacity for critical thinking
- Communicate effectively, being understood, including across different languages and cultures.

Teaching methods

Classroom lectures, where I will use Beamer slides and the blackboard.

Assessment methods

Final written exam and continuous assessment (including a mini project).
