| Session                    |           |
| Exam                       | Oral      |
| Workload                   | 120h      |
| <b>Hours</b>               | <b>56</b> |
| Courses                    | 28        |
| Exercises                  | 28        |
| <b>Number of positions</b> |           |

**Frequency**

Every 2 years

**Remark**

Every 2 years / Next time: Spring 2019

**Summary**

The course provides an overview of the technologies that are essential for fusion developments and for industrial plasma applications, highlighting the synergies between the two fields. The aim is to provide a combined theoretical and experimental background to the various topics.

**Content**

The course will consist of three parts:

1. Common aspects of fusion and industrial plasma technologies
  - Vacuum technologies; Cryogenics; Electrical arcs; High current and voltage systems (3 weeks)
2. Specific fusion aspects
  - Control and data acquisition (1 week)
  - mm-wave systems (2 weeks)
  - Plasma fuelling and tritium cycle (1 week)
  - Materials for fusion (3 weeks)
  - Superconducting magnets for fusion (2 weeks)
3. Specific industrial plasma applications techniques (2 weeks)
