Topics on Datacenter Design (2019)

Falsafi Babak, Kermarrec Anne-Marie

Cursus	Sem.	Type
Computer and Communication Sciences		Obl.

Language of teaching	English
Credits	4
Session	
Exam	Oral presentation
Workload	120h
Hours	56
Courses	28
TP	28
Number of positions	

Frequency

Every 2 years

Remark

Next time: unknown

Summary

Modern datacenters with thousands of servers and multi-megawatt power budgets form the backbone of our digital universe. In this course, we will survey a broad and comprehensive spectrum of datacenter design topics from workloads, to server architecture and infrastructure.

Content

The course will use the primer from ClayPool lecture series on Warehouse-Scale Computing by Barroso and Hoelzle, and technical research papers from recent years in venues corresponding to the topic. The course will be run as a seminar series with student presentations followed by an in-class discussion. The students will be graded based on presentations and short reviews written for each reading assignment.

Datacenter basics: computing at scale of tens of thousands of servers
 Quality of service, energy proportionality and total cost of ownership
 Workloads
 Programming paradigms
 System software
 Virtualization
 Networking
 Storage systems
 Processors and memory systems
 Resource management
 Infrastructure: power distribution and cooling

Keywords

datacenter, warehouse-scale computing, scale-out

Learning Prerequisites**Recommended courses**

Computer Systems

Assessment methods

Oral presentation
