

# BIO-611 Practical - Constam Lab

Constam Daniel

Cursus	Sem.	Type
Molecular Life Sciences		Obl.

Language of teaching	English
Credits	1
Session	
Exam	Written
Workload	30h
Hours	27
Courses	7
TP	20
Number of	2
positions	

### Frequency

Every year

#### Remark

3-day Block course, every year in January. To register, contact EDMS Administration

### **Summary**

During development, cell fates are governed by multiple microenvironmental cues and their integration by specific signal transduction pathways. This course focuses on imaging of mechanosensory cilia or of molecules implicated in specific signal transduction events during mammalian embryogenesis.

#### Content

#### Analysis of RNA-protein interactions by EMSA assays

- Preparation, handling and characterization of RNA in vitro:
- PCR amplification and purification of a template DNA for in vitro transcription
- In vitro transcription and purification of RNAs
- Spectrophotometric analysis of purified RNAs
- Characterization of recombinant protein-RNA complexes in vitro:
- Electrophoretic Mobility Shift Assay (EMSA) using fluorescently labelled RNA probes
- Determination of binding affinities by calculation of dissociation constant (Kd)

#### Keywords

Embryogenesis, cancer, proteases, TGFb signaling, primary cilia, imaging

# **Learning Prerequisites**

### **Recommended courses**

Basics of molecular and cell biology.

## **Assessment methods**

Quiz (multiple choice questions)
