

CS-550

**Formal verification**

Kuncak Viktor

Cursus	Sem.	Type
Computer and Communication Sciences		Opt.
Computer science	MA1, MA3	Opt.
Cybersecurity	MA1, MA3	Opt.
Data Science	MA1, MA3	Opt.
SC master EPFL	MA1, MA3	Opt.

Language of teaching	English
Credits	6
Session	Winter
Semester	Fall
Exam	During the semester
Workload	180h
Weeks	14
<b>Hours</b>	<b>6 weekly</b>
Courses	2 weekly
Exercises	2 weekly
TP	2 weekly
<b>Number of positions</b>	

**Summary**

We introduce formal verification as an approach for developing highly reliable systems. Formal verification finds proofs that computer systems work under all relevant scenarios. We will learn how to use formal verification tools and explain the theory and the practice behind them.

**Content**

Topics may include among the others some of the following:

- Importance of Reliable Systems. Methodology of Formal Verification. Soundness and Completeness in Modeling and Tools. Successful Tools and Flagship Case Studies
- Review of Sets, Relations, Computability, Propositional and First-Order Logic Syntax, Semantics, Sequent Calculus.
- Completeness and Semi-Decidability for First-Order Logic. Inductive Definitions and Proof Trees. Higher-Order Logic and LCF Approach.
- State Machines. Transition Formulas. Traces. Strongest Postconditions and Weakest Preconditions.
- Hoare Logic. Inductive Invariants. Well-Founded Relations and Termination Measures
- Modeling Hardware: Verilog to Sequential Circuits
- Linear Temporal Logic. System Verilog Assertions. Monitors
- SAT Solvers and Bounded Model Checking
- Model Checking using Binary Decision Diagrams
- Loop Invariants. Hoare Logic. Statically Checked Function Contracts. Relational Semantics and Fixed-Point Semantics
- Symbolic Execution. Satisfiability Modulo Theories
- Abstract Interpretation and Predicate Abstraction
- Information Flow and Taint Analysis
- Verification of Security Protocols
- Dependent and Refinement Types

**Learning Prerequisites****Recommended courses**

Computer Language Processing / Compilers

**Important concepts to start the course**

## Discrete Mathematics

### Learning Outcomes

By the end of the course, the student must be able to:

- Formalize specifications
- Synthesize loop invariants
- Specify software functionality
- Generalize inductive hypothesis
- Critique current software development practices

### Teaching methods

Instructors will present lectures and exercises and supervise labs on student laptops.

### Expected student activities

Follow the course material and complete and explain projects during the semester.

### Assessment methods

The grade is based on the code, documentation, and explanation of projects during the semester. There are no written exams.

### Supervision

Office hours	Yes
Assistants	Yes
Forum	Yes

### Resources
