

EE-518

Analog circuits for biochip

Carrara Sandro, Dehollain Catherine, Skrivervik Anja

Cursus	Sem.	Type
Bioengineering	MA4	Opt.
Data and Internet of Things minor	E	Opt.
Electrical and Electronical Engineering	MA2, MA4	Opt.
Life Sciences Engineering	MA2, MA4	Opt.
Sciences du vivant	MA4	Opt.

Language of teaching	English
Credits	3
Session	Summer
Semester	Spring
Exam	Written
Workload	90h
Weeks	14
Hours	3 weekly
Courses	2 weekly
Exercises	1 weekly
Number of positions	

Summary

Introduction to analog CMOS design for Remote Biosensors on Chip. Understanding and designing of active and remotely powered biosensing systems. Basic understanding of the wireless transmission of the obtained signals.

Content

Principles of biosensing: Target/Probe Interactions

Electrochemical biosensing: three-electrode electrochemical cell and its equivalent circuits

Basic CMOS configurations for electrochemical biosensing

Voltage-ramp generators on chip

Current readers: current-to-voltage and current-to-frequency conversion

Wireless transmission in lossy media: issues on temperature, specific absorption rate (SAR) and efficiency. Antennas for such devices

Regulation aspects of wireless transmission close or in living matter: maximum value of the SAR and the temperature with respect to the frequency of operation and the body tissue.

Power suppliers: non-rechargeable battery, rechargeable battery, super-capacitor, and storing capacitor

Different types of remote powering coupling between control units and remote biosensors

Passive (load modulation and backscattering) and active transmitters for RF communication

System Configuration for remote powering operation and data communication.

Keywords

OpAmp, CMOS, biosensors, RF communication, Remote Powering, wireless transmission

Learning Prerequisites**Required courses**

Electronics I and II

Learning Outcomes

By the end of the course, the student must be able to:

- Design complete devices for remote biosensing at a system level
- Design simple analog circuits for the biosensor frontend
- Design simple analog circuits for the RF data communication
- Design simple analog circuits for the remote powering operation
- Assess / Evaluate appropriate sources of information

Teaching methods

ex cathedra with supervised exercises

Assessment methods

exam

Resources

Bibliography

- [Bio/CMOS interfaces and co-design / Carrara](#)
- [Design and optimization of passive UHF RFID systems / Curty](#)
