

EE-536

**Physical models for micro and nanosystems**

Kis Andras

Cursus	Sem.	Type
Electrical and Electronical Engineering	MA1, MA3	Opt.
MNIS	MA3	Obl.

Language of teaching	English
Credits	2
Session	Winter
Semester	Fall
Exam	During the semester
Workload	60h
Weeks	14
<b>Hours</b>	<b>2 weekly</b>
Courses	2 weekly
<b>Number of positions</b>	

**Summary**

Students will learn simple theoretical models, the theoretical background of finite element modeling as well as its application to modeling charge, mass and heat transport in electronic, fluidic and electromechanical micro and nanosystem.

**Content**

1. Finite element method - background and implementation
2. Modeling electrostatic problems, voltage and charge distribution
3. Micro and nanoelectromechanical devices: mechanical properties, modeling electromechanical coupling
4. Detection systems for x-ray and gamma ray imaging devices
5. Modeling of fluid mechanics in micro and nanosystems
6. Modeling heat transfer

**Learning Prerequisites****Required courses**

Basic electronics and physics

**Learning Outcomes**

By the end of the course, the student must be able to:

- Choose the appropriate approach to modelling a simple device
- Design a Comsol model appropriate for a given device type
- Interpret the predictions from a model
- Solve a simple theoretical device model
- Perform a sanity check on a model
- Choose the appropriate boundary conditions

**Teaching methods**

Ex cathedra

Exercises on a computer using Comsol

Project work in a small group

**Assessment methods**

Project report and presentation
