HES - CGC		E	Opt.		3 Summer Spring During the semester
				Workload Weeks	90h 14

Summary

We will review modern technique for the determination of structure and dynamics in chemistry. Recent developments in spectroscopy as well as methods that target the fundamentals of chemical reactions will be discussed, and applications will be studied.

Content

Recent developments in spectroscopy Reaction dynamics experiments Control of chemical reactions Studies of dynamics in the gas phase, on solid/liquid surfaces, and in bulk liquid

Learning Prerequisites

Important concepts to start the course **Quantum Mechanics** Spectroscopy Kinetics

Learning Outcomes

By the end of the course, the student must be able to:

- · Compare different techniques for spectroscopy and dynamics
- Decide on the optimum method for any given problem
- Judge the quality of spectroscopic and dynamic studies
- Describe different experimental methods
- · Anticipate the outcome of a particular experiment
- Explain control concepts in chemical dynamics

Transversal skills

- Plan and carry out activities in a way which makes optimal use of available time and other resources.
- Use a work methodology appropriate to the task.
- Demonstrate a capacity for creativity.
- · Demonstrate the capacity for critical thinking

Hours

Courses

Exercises Number of positions

Expected student activities

Ask questions, read journal articles, prepare a ca. 30 minute presentation on a topic within the scope of the course.

Assessment methods

Requirement: Oral presentation during the semester (not graded) Grade: Paper on a specific question in the context of the topics discussed during the semester
