

PHYS-427

Relativity and cosmology I

Shaposhnikov Mikhail

Cursus	Sem.	Type
Ing.-phys	MA1, MA3	Opt.
Physicien	MA1, MA3	Opt.

Language of teaching	English
Credits	6
Session	Winter
Semester	Fall
Exam	Oral
Workload	180h
Weeks	14
Hours	4 weekly
Courses	2 weekly
Exercises	2 weekly
Number of positions	

Summary

Introduce the students to general relativity and its classical tests.

Content**Special Relativity (Review):**

- Lorentz transformations
- Energy-momentum tensor

General relativity:

- Equivalence principle
- Tensor analysis and physics in curved space-time
- Einstein's equations
- Schwarzschild solution
- Classical tests of Einstein's theory
- Gravitational waves

Learning Prerequisites**Required courses**

Analytical mechanics
Classical Electrodynamics

Learning Outcomes

By the end of the course, the student must be able to:

- Explain the basic concepts of special and general relativity
- Describe physical phenomena in different coordinate systems
- Compute Christoffel symbols and curvatures from a given line element
- Solve Einstein's field equations for static spherically symmetric problems
- Explain the observational effects at the scale of the Solar System that cannot be described by Newtonian gravity

Teaching methods

Ex cathedra and exercices in classroom

Assessment methods

final exam 100%

Supervision

Office hours	Yes
Assistants	Yes
