

MSE-468

**Atomistic and quantum simulations of materials**

Marzari Nicola

Cursus	Sem.	Type
Computational science and Engineering	MA2, MA4	Opt.
Materials Science and Engineering	MA2, MA4	Opt.

Language of teaching	English
Credits	4
Session	Summer
Semester	Spring
Exam	During the semester
Workload	120h
Weeks	14
<b>Hours</b>	<b>4 weekly</b>
Courses	3 weekly
TP	1 weekly
<b>Number of positions</b>	

**Summary**

Theory and application of quantum simulations to model, understand, and predict the properties of real materials.

**Content**

- Materials simulations and energy models: from classical potentials to quantum models.
- Electronic-structure and first-principles approaches (density-functional theory and the total-energy pseudopotential method).
- Errors and accuracy of quantitative predictions.
- Temperature and thermodynamic averages: Monte Carlo sampling and molecular dynamics simulations.
- Free energies and phase transitions.
- How to obtain materials' properties from simulations.
- Computational laboratories: Mechanical properties of materials (classical and quantum approaches). Electronic band structures and density of states. Molecular dynamics, diffusion coefficients and phase transitions. These labs will be performed using well known simulation codes, like GULP (for the classical simulations) and Quantum ESPRESSO (for the quantum simulations).

**Learning Prerequisites****Recommended courses**

Fundamentals of solid-state materials, or similar.

**Learning Outcomes**

By the end of the course, the student must be able to:

- Model materials with quantum mechanical simulations

**Teaching methods**

Ex cathedra and computational laboratories

**Assessment methods**

Written reports of computational labs during the term. The last (fourth) written report has to be submitted at last on the Friday of the first week after the end of the teachings.

## Resources

### Virtual desktop infrastructure (VDI)

Yes
