

MATH-517

**Statistical computation and visualisation**

Mhalla Linda

Cursus	Sem.	Type
Ing.-math	MA1, MA3	Opt.
Mathématicien	MA1, MA3	Opt.
Statistics	MA1, MA3	Opt.

Contact language	English
Credits	5
Withdrawal Session	Unauthorized Winter
Semester	Fall
Exam	During the semester
Workload	150h
Weeks	14
<b>Hours</b>	<b>4 weekly</b>
Lecture	2 weekly
Exercises	2 weekly
<b>Number of positions</b>	

**Summary**

The course will provide the opportunity to tackle real world problems requiring advanced computational skills and visualisation techniques to complement statistical thinking. Students will practice proposing efficient solutions, and effectively communicating the results with stakeholders.

**Content**

- Modern statistical computing environments (e.g., R, Rstudio and Python)
- Overview of other software (e.g., MATLAB, Julia)
- Aids to efficiency and reproducibility (e.g., GitHub, Markdown, Jupyter)
- Data management, wrangling, and ethics
- Statistical graphics (grammar, good practices, applications, and examples)
- EM algorithm and applications
- Kernel density estimation and smoothing
- Resampling methods for uncertainty assessment (bootstrap, jackknife, cross-validation), with applications to regression, time series and dependent data
- Markov chain Monte Carlo techniques (Gibbs sampler, Metropolis-Hastings algorithm, Hamiltonian Monte Carlo, convergence diagnostics) and software (e.g., Stan)
- Other methods for Bayesian inference (e.g., importance sampling, INLA, AGHQ, ...)

**Keywords**

Statistical computation, data visualisation, data wrangling, resampling methods, EM algorithm, Bayesian inference

**Learning Prerequisites**

### Required courses

- Probability and statistics
- Linear models

### Learning Outcomes

By the end of the course, the student must be able to:

- Plan complex visualisation and computational tasks
- Perform complex visualisation and computational tasks
- Implement reproducible computational solutions to statistical problems in modern environments and platforms

### Transversal skills

- Take feedback (critique) and respond in an appropriate manner.
- Communicate effectively with professionals from other disciplines.
- Demonstrate the capacity for critical thinking
- Identify the different roles that are involved in well-functioning teams and assume different roles, including leadership roles.

### Teaching methods

Two lecture hours per week, two hours of exercises and support on mini-projects

### Expected student activities

Students will work on mini-projects in teams

### Assessment methods

Contrôle continue

### Supervision

Office hours	No
Assistants	Yes
Forum	No

### Resources

#### Bibliography

Wickham H. & Golemund G. (2017) R for Data Science  
Bootstrap Methods and their Application  
An Introduction to Statistical Learning
