

# CS-524 Computational complexity

Sokolov Dmitrii				
Cursus	Sem.	Type	Language of	English
Computer science	MA1, MA3	Opt.	teaching	Liigiisii
Cybersecurity	MA1, MA3	Opt.	Credits Session Semester Exam	6 Winter Fall During the semester 180h
Data Science	MA1, MA3	Opt.		
Minor in Quantum Science and Engineering	Н	Opt.		
Quantum Science and Engineering	MA1, MA3	Opt.	Workload	
SC master EPFL	MA1, MA3	Opt.	Weeks	14
			Lecture Exercises Number of positions	4 weekly 2 weekly 2 weekly

## **Summary**

In computational complexity we study the computational resources needed to solve problems and understand the relation between different types of computation. This course advances the students knowledge of computational complexity, and develop an understanding of fundamental open questions.

#### Content

- Complexity classes (time, space, nondeterminism)
- Space complexity (Logspace, L vs NL)
- Boolean circuits and nonuniform computation
- Power of randomness
- Lower bounds for concrete models of computation: Decision trees, communication protocols, propositional proofs.

### **Keywords**

theoretical computer science computational complexity

### **Learning Prerequisites**

# **Recommended courses**

Theory of computation (CS-251) Algorithms (CS-250)

# **Learning Outcomes**

By the end of the course, the student must be able to:

- Demonstrate an understanding of computational complexity and the P vs NP problem
- Formalize and analyze abstractions of complex scenarios/problems
- Express a good understanding of different concepts of proofs
- Prove statements that are similar to those taught in the course
- Use and understand the role of randomness in computation

- Illustrate a basic understanding of probabilistically checkable proofs and their characterization of the class NP (the PCP-Theorem)
- Explain recent exciting developments in theoretical computer science
- Compare different models of computation

#### Transversal skills

- · Demonstrate the capacity for critical thinking
- Summarize an article or a technical report.

## **Teaching methods**

Lecturing and exercises

#### **Expected student activities**

Actively attending lectures and exercise sessions. Also homeworks and exam.

#### **Assessment methods**

Three homeworks and final exam

#### Resources

### **Bibliography**

Sanjeev Arora and Boaz Barak: Computational Complexity: A Modern Approach, Cambridge University Press

Stasys Jukna: Boolean Function Complexity, Springer

### Ressources en bibliothèque

- Computational Complexity: A Modern Approach / Arora
- Boolean Function Complexity / Stasys
