Summary

In the lectures you will learn and understand the main ideas that underlie and the way communication networks are built and run. In the labs you will exercise practical configurations.

Content

The TCP/IP architecture.

Layer 2 networking; Bridging.

The Internet protocol versions 4 and 6.

The transport layer, TCP, UDP, sockets, QUIC.

Link state routing, OSPF, Distance Vector routing. Interdomain routing, BGP.

Congestion control principles. Application to the Internet. The fairness of TCP. Tunnels and hybrid architectures.

Keywords

TCP/IP

Computer Networks

Learning Prerequisites

Required courses

A first programming course

Recommended courses

COM-208 Computer Networks

Learning Outcomes

By the end of the course, the student must be able to:

- Run and configure networks
- Understand the main ideas that underlie the Internet
- Write simple communicating programs
- Use communication primitives for internet and industrial applications.

Transversal skills

TCP/IP networking Page 1 / 2

- Access and evaluate appropriate sources of information.
- Continue to work through difficulties or initial failure to find optimal solutions.

Teaching methods

Lectures.

Online quizzes.

Labs on student's computer.

Expected student activities

Participate in lectures

Participate in online quizzes

Make lab assignments (in the rule, every other week)

Assessment methods

Theory grade = final exam

Practice grade = average of labs

Final grade = mean of theory grade (50%) and practice grade (50%).

The research exercice may add a bonus of at most 0.5 points in 1-6 scale to the practice grade.

Supervision

Office hours Yes
Assistants Yes
Forum Yes
