

# EE-431 Advanced VLSI design

Burg Andreas Peter, Levisse Alexandre Sébastien Julien

Cursus	Sem.	Type
Electrical and Electronical Engineering	MA2, MA4	Opt.

Language of **English** teaching Credits Session Summer Semester Spring Written Exam Workload 120h Weeks 14 Hours 4 weekly Lecture 2 weekly Exercises 2 weekly Number of positions

## **Summary**

In this project-based course, students collect hands-on experience with designing full-custom digital VLSI circuits in dynamic logic. They learn to carry out the design and optimization on transistor level, including logic and clock tree, the verification, and the layout.

#### Content

## Introduction to dynamic logic:

An alternative logic style derived from CMOS, used for high-speed logic, as basis for the project

#### Introduction to fast adder circuits:

Fast adder structures as basic building block of computer arithmetic

## Layout and floorplanning:

Practical guidelines for full-custom layout of custom digital circuits

#### PROJECT (covers 80% of the course):

Build a 1GHz 64 Bit Parallel Prefix Adder in a 90nm technology on transistor level, including logic design, schematic entry, clock tree design, simulation, parasitic estimation, layout, and verification.

### **Keywords**

VLSI, CMOS, transistor level, layout, adder, dynamic logic

## **Learning Prerequisites**

## Required courses

EE-429 Fundamentals of VLSI design

EE-490(b) Lab in EDA based design (or experience with CADENCE Virtuoso)

### **Learning Outcomes**

By the end of the course, the student must be able to:

- Compose a transistor-level integrated circuit
- · Analyze its performance
- · Anticipate layout effects
- Design its layout

### **Teaching methods**

Project based course with few lectures
