## Summary

Linear statistical methods, analysis of experiments, logistic regression.

## Content

- Simple linear regression, least squares estimation
- t-tests, confidence intervals
- Multiple regression
- Model selection
- Experimental designs
- One-way, two-way ANOVA
- Chi-square test
- Logistic regression

## Learning Outcomes

By the end of the course, the student must be able to:

- Demonstrate understanding of course material
- Apply understanding to exercise/real life scenarios

## Transversal skills

- Use a work methodology appropriate to the task.

## Teaching methods

Lectures and group exercises

## Expected student activities

Students should be prepared to participate in their learning by participating during lecture, asking questions, and contributing to exercise sessions

## Assessment methods

Written

## Supervision

| Office hours | Yes |
| :--- | :--- |
| Assistants | Yes |
| Forum | Yes |

## Resources

Virtual desktop infrastructure (VDI)
No

Bibliography
Introduction à la statistique / Morgenthaler; possibly additional works (to be announced).
Pre-recorded lectures (videos) will also be provided.

Ressources en bibliothèque

- Introduction à la statistique / Morgenthaler
