Mechanical engineering minor

Mechanical engineering

ME-464	Introduction to nuclear engineering		
	Scolaro Alessandro		
Cursus		Sem.	Туре
Energy minor		E	Opt.

Language of teaching	English	
Credits	2	
Session	Summer	
Semester	Spring	
Exam	Oral	
Workload	60h	
Weeks	14	
Hours	2 weekly	
Lecture	2 weekly	
Number of positions		

#### Summary

This course is intended to understand the engineering design of nuclear power plants using the basic principles of reactor physics, fluid flow and heat transfer. This course includes the following: Reactor designs, Thermal analysis of nuclear fuel, Nuclear safety and Reactor dynamics

Е

Opt.

MA2, MA4 Opt.

#### Content

Brief review of nuclear physics

- Nuclear reactions and radioactivity - Cross sections - Introductory elements of neutronics.

Neutron diffusion and slowing down

- Monoenergetic neutrons - Angular and scalar flux - Diffusion theory as simplified case of transport theory - Neutron slowing down through elastic scattering.

Reactor dynamics

- Point reactor model: prompt and delayed transients - Practical applications - Reactivity variations and control Nuclear safety principles

- Defense in Depth - Radiation protection - Design Basis Accidents - Beyond Design Basis Accidents phenomenology - Fukushima Accident

Nuclear Reactor Technology

- Gen-II/III, active & passive safety systems - Gen-IV - reactor concepts: SFR, LFR, HTR, MSR

Non-power applications of nuclear engineering

- research reactors - isotope production - medical and irradiation applications -

Waste Management

- transport, intermediate storage - waste conditioning - geological disposal and siting - reprocessing - Partitioning & Transmutation

### Learning Outcomes

By the end of the course, the student must be able to:

- Elaborate on neutron life cycle in a reactor, neutron diffusion equation, reactor kinetics, reactor thermal-hydraulics, physics of fission reaction
- Formulate approximations to solving the diffusion equation for simple systems
- Describe various nuclear reactors concepts
- Explain nuclear safety principles, design basis accidents, severe accidents, safety systems, radiation protection

## Assessment methods

Oral (100%) - 20 min without preparation. Closed book.
