

BIOENG-444

Advanced bioengineering methods laboratory

Fantner Georg, Guiducci Carlotta, Radenovic Aleksandra

| Cursus | Sem. | Type | |
|---------------------------|----------|------|------------------------------|
| Life Sciences Engineering | MA2, MA4 | Opt. | |
| | | | Language of teaching English |
| | | | Credits 4 |
| | | | Withdrawal Unauthorized |
| | | | Session Summer |
| | | | Semester Spring |
| | | | Exam During the semester |
| | | | Workload 120h |
| | | | Weeks 14 |
| | | | Hours 4 weekly |
| | | | Practical work 4 weekly |
| | | | Number of positions 18 |

Remark

The course is held in an amended format giving more freedom to students to learn plan and perform research

Summary

Advanced Bioengineering Methods Laboratories (ABML) offers laboratory practice and data analysis. These active sessions present a variety of techniques employed in the bioengineering field and matching a quantitative and technological based approach.

Content**Keywords**

Atomic force microscopy (AFM), Lab on the chip (LOC) , Brownian motion, Optical trapping , Surface Plasmon Resonance. bioanalytics, surface design, writing scientific papers

Learning Prerequisites**Required courses**

Required background: Biophysics I, Biothermodynamics, Biomicroscopy I, + mandatory courses of M1

Expected student activities

Beyond the work requested during the supervised sessions (practice and analysis), the student will have to:

- *Read the introduction of each topic before the corresponding practice, and summarize this information in his laboratory notebook.*
- *Review the data analysis tools needed for the analysis sessions and prepare the required calculations ahead of the corresponding analysis session.*
- *Fill the laboratory notebook progressively along the semester.*
- *Develop a research plan for the independent project*
- *Write the research paper*

The workload varies widely with the capabilities of each student. However, we expect, for each of the 6 topics investigated, an approximate working time of

- 2 h : Preparation of the practical session
- 4 h : Practical session

Resources

Bibliography

- Handouts given during the course.
- *Intermolecular and Surface Forces*, J. Israelachvili, Academic press
- *Surface Plasmon resonance Based Sensors*, J. Homola et al., Springer
- *Surface Design: Applications in Bioscience and Nanotechnology*, R. Förch, H. Schonherr, A.T. Jenkins, Wiley
- "Introduction to Error Analysis: The Study of Uncertainties in Physical Measurements," Taylor, John R., 1997, University Science Books,
- Optical Trapping Review : K.C. Neuman & S.M. Block, "Optical trapping," Rev. Sci. Instrum. 75 (2003).
- Lab on a Chip Technology, Volume 1: Fabrication and Microfluidics, Keith E. Herold and Avraham Rasooly, Caister Academic Press, 2009
- Atomic Force Microscopy, Peter Eaton and Paul West, Oxford University Press 2010
