Summary

Introduction to the application of the notions and methods of theoretical physics to problems in biology.

Content

- 1. Introduction to polymer theory:** on and off-lattice polymers; statistical properties; exact, numerical and approximate results; correlation length; self-avoidance.
- 2. Interacting polymers:** experiments and models; analytical and numerical solutions of the models; phase diagram.
- 3. Proteins:** their role in biology; basic components; experimental results; models; analytical and numerical results.
- 4. Molecular Binding:** Derivation of basic rules. Equilibrium and non-equilibrium binding.
- 5. Molecular Motors: how to use energy for directed motion.**

Learning Prerequisites**Recommended courses**

Course of Statistical Physics

Learning Outcomes

By the end of the course, the student must be able to:

- Solve problems in polymers statistical physics

Transversal skills

- Assess one's own level of skill acquisition, and plan their on-going learning goals.

Teaching methods

Ex cathedra. Exercises in class

Assessment methods

oral
