

MICRO-429

Metrology practicals

Bruschini Claudio, Charbon Edoardo, Fantner Georg

Cursus	Sem.	Type
Microtechnics	MA2, MA4	Opt.
Minor in Imaging	E	Opt.
Quantum Science and Engineering	MA2, MA4	Opt.
Space technologies minor	E	Opt.

Language of teaching	English
Credits	3
Withdrawal Session	Unauthorized Summer
Semester Exam	Spring During the semester

Workload	90h
Weeks	14
Hours	3 weekly
Practical work	3 weekly

Number of positions

Il n'est pas autorisé de se retirer de cette matière après le délai d'inscription.

Remark

Ces TP sont optionnels et ne peuvent être suivis qu'en parallèle du cours MICRO-428 Metrology

Summary

The student will get familiar with the techniques learnt in class (MICRO-428) and will put them to practice with experiments in the laboratory. There will be a practical training for each theme covered in class; the students will also learn good practices during measurements (lab notebook included).

Content

The topics covered by the course are summarized as follows:

- Introduction
- Dark count rate (DCR) and afterpulsing statistics in photon-counting device
- Sensitivity in photon-counting devices
- Timing jitter measurements in single-photon detectors
- Scanning electron microscopy
- Atomic force microscope

Keywords

SPAD, TCSPC, PDP, PDE, SPTR, CTR, DCR, AFM, SEM, optical microscopy

Learning Prerequisites**Required courses**

MICRO-428 *Metrology*

Recommended courses

Design of Experiments

Important concepts to start the course

Matlab for data read-out and processing

Learning Outcomes

By the end of the course, the student must be able to:

- Choose an appropriate measurement methodology
- Develop the understanding of measurement tools and instruments
- Design a measurement experiment
- Interpret measurement results
- Investigate issues related to the accuracy and precision

Transversal skills

- Demonstrate the capacity for critical thinking

Teaching methods

One introductory lecture followed by lab practicals in the second half of the semester.

Expected student activities

Mandatory advance preparation before each lab practical
Experimentation and note taking/description (lab notebook)
Interaction with the Lecturers and TAs

Assessment methods

Continuous assessment for each lab practical

Supervision

Office hours	Yes
Assistants	Yes

Resources

Notes/Handbook

On Moodle: handouts of all practicals available after the Introductory lecture.
