

PHYS-501

**Nonlinear Optics**

Roke Sylvie

Cursus	Sem.	Type
Microtechnics	MA2, MA4	Opt.
Photonics minor	E	Opt.
Photonics		Opt.

Language of teaching	English
Credits	4
Session	Summer
Semester	Spring
Exam	Written
Workload	120h
Weeks	14
<b>Hours</b>	<b>4 weekly</b>
Courses	2 weekly
Exercises	2 weekly
<b>Number of positions</b>	

**Summary**

Basic principles of optics

**Content**

A selection of the following topics will be offered:

- Introduction / overview of nonlinear optical phenomena
- Wave description of nonlinear optical processes
- The intensity dependence of the refractive index
- Spontaneous and stimulated light scattering processes
- Electrooptic and photorefractive effects
- Optically induced damage
- Ultrafast Nonlinear processes

**Keywords**

nonlinear optics, second and third harmonic generation, optical fibers, solitons

**Learning Prerequisites****Required courses**

During the course we will assume a basic understanding of physics and optics. As a work of reference one can use:

Grant R. Fowles, Introduction of Modern Optics

**Recommended courses**

Basics of optics

**Learning Outcomes**

By the end of the course, the student must be able to:

- Assess / Evaluate nonlinear optical interactions
- Theorize about the type of possible interactions

- Analyze symmetry and related properties
- Solve the coupled wave equation
- Analyze second and third order effects
- Interpret electro-optic effects
- Interpret laser induced damage

### **Assessment methods**

Written exam

### **Resources**

#### **Bibliography**

R. W. Boyd, Nonlinear Optics, Ed3

#### **Ressources en bibliothèque**

- [Nonlinear Optics / Boyd](#)

#### **Notes/Handbook**
