EPFL

PHYS-741   **Gauge Theories and the Standard Model**

Riembau Saperas Marc, Wulzer Andrea

Cursus	Sem.	Type
Physics		Opt.

Language of teaching	English
Credits	4
Session	
Exam	Multiple
Workload	120h
Hours	**56**
Courses	28
Exercises	28
Number of positions	

Frequency

Every year

Remark

Next time: Fall

Summary

The goal of this course is to explain the conceptual and mathematical bases of the Standard Model of fundamental interactions and to illustrate in detail its phenomenological consequences.

Content

- Non-abelian gauge theories
- Higgs mechanism and massive gauge theories
- Quarks and Leptons
- Basic electroweak phenomenology
- The flavour structure: quark masses and mixing
- Strong interactions
- Basic flavour phenomenology
- The Standard Model as an Effective Field Theory

Keywords

fundamental interactions, particle phenomenology
gauge theories, Higgs mechanism,

Learning Prerequisites

Required courses

Relativistic Quantum Fields I et II, Advanced Quantum Mechanics,
Advanced Quantum Field Theory,

Recommended courses

General Relativity, Cosmology

Expected student activities

Appreciate the conceptual foundations of the Standard Model as a theory of fundamental interactions and quantavely understand its phenomenological success. Be able to concretely apply the Standard Model theory to the prediction of

physical processes.
