BIO-622 Practical - Lingner Lab

Lingner Joachim

Cursus	Sem.	Туре	Language of	English
Molecular Life Sciences		Obl.	teaching	English
			Credits	1
			Session	
			Exam	Oral
				presentation
			Workload	30h
			Hours	26
			Courses	5
			TP	21
			Number of	2
			positions	

Frequency

Every year

Remark

3-day Block course, every year in January. To register, contact EDMS Administration

Summary

Telomere biology. The students will obtain theoretical and practical insight into telomere biology and the roles of telomeres during cellular senescence and for genome stability.

Content

A general theoretical introduction will be given in the beginning of the course. In the laboratory, human cells will be used as model systems. Biochemical, molecular biological and cell biological assays will be performed. Specifically, telomerase activity will be measured in cellular extracts, the affinity of an RNA-protein interaction will be determined in band-shift assays and telomere integrity will be assessed by immunofluorescence.

Note

Please note that you are not allowed to inscribe in your own group!

Note that 3 practical courses are mandatory for all EDMS students and that they have the priority; each course has between 2 to 4 possible slots.

Therefore, please do not register by yourself to this course, this will be done by the EDMS program administrator!

Keywords

Telomeres, telomerase, reverse transcriptase, cellular senescence, genome stability

Learning Prerequisites

Recommended courses

Background reading: Nandakumar, J and Cech, TR: Finding the end: recruitment of telomerase to telomeres. Nat Rev Mol Cell Biol 2013 Feb; 14(2):69-82
