

CIVIL-705

## Selected Topics on Advanced Composites in Engineering Structures

Vassilopoulos Anastasios

Cursus	Sem.	Type
Civil & Environmental Engineering		Opt.

Language of teaching	English
Credits	2
Session	
Exam	Multiple
Workload	60h
<b>Hours</b>	<b>28</b>
Courses	18
Exercises	10
<b>Number of positions</b>	

### Frequency

Every 2 years

### Remark

CANCELLED Spring 2023, Next time: Spring 2024, Min. 5 persons.

### Summary

The course focuses on the current investigations in the fields of fatigue and fracture of composite materials and composite structural components, like adhesively-bonded joints. Students would be able to develop design concepts for composite structures under realistic loading conditions

### Content

Introduction to composite materials and the specific design concepts of structures with this type of material. Description of the characteristics of composite materials and their singularities. Selected topics to be addressed are:

- Failure modes and failure criteria for composite materials,
- Fatigue of composite materials and structures,
- Multiaxial static/fatigue behaviour,
- Fracture of composite materials,
- Joining techniques,
- Issues raised by the students, related to their PhD projects

### Keywords

Composite materials, fatigue, fracture, joining techniques.

### Learning Prerequisites

#### Required courses

Basic knowledge about composite materials and theory of elasticity.

### Resources

#### Websites
