PHYS-754

Lecture series on scientific machine learning

Carleo Giuseppe, Ceriotti Michele, De Los Rios Paolo, Mathis Alexander, Schwaller Philippe, Wyart Matthieu, Zdeborová Lenka

Cursus	Sem.	Type
Computer and Communication Sciences		Obl.
Electrical Engineering		Opt.
Materials Science and Engineering		Opt.
Neuroscience		Opt.
Physics		Opt.

Language of teaching	English
Credits	2
Session	
Exam	Oral presentation
Workload	60h
Hours	**42**
Lecture	14
Project	28
Number of positions	

Frequency

Every 2 years

Remark

Next time: Fall 2024

Summary

This lecture presents ongoing work on how scientific questions can be tackled using machine learning. Machine learning enables extracting knowledge from data computationally and in an automatized way. We will learn on examples how this is influencing the very scientific method.

Content

Machine learning is a data analysis and computational tool that in the last two decades brought groundbreaking progress into many modern technologies. What is more, machine learning is becoming an indispensable tool enabling progress in many scientific disciplines where knowledge is deduced from data.
This course will present some recent works in this direction. In the first part of the course works of different EPFL laboratories that use machine learning to address scientific questions in physics, chemistry, material science and biology will be presented.
Professors involved include: Lenka Zdeborova, Giuseppe Carleo, Michele Ceriotti, Philippe Schwaller, Matthieu Wyart, Alexander Mathis, Paolo De los Rios. Examples of problems covered include neural-network enhanced solutions of the Schrodinger equation in a variety of contexts, machine learning for the prediction and rationalization of chemical and physical properties of materials, analysis of proteins from their sequence and structure, or automated data analysis and modeling brain-function in neuroscience. In the second part of the lecture students will read, present and discuss selected recent articles on the subject.
Prior basic notions of machine learning are required, any of the introductory courses to machine learning is suitable. This lecture is accessible to all students across disciplines interested in natural and computational sciences.

Note

Next session: Fall 2024!
