# Frequency

Every year

#### Remark

Summer 2023

# Summary

The student has been exposed to the use of modelling, coding, and visualization as a means to understand a research problem more deeply. The student will have experience in symbolic and numerical of Mathematica. The student has been exposed to data analysis and visualization.

#### Content

Students will use modelling, coding, and visualization as a means to understand a research problem more deeply--or at least differently. The class will be given using Mathematica, but the examples translate to any high-level language. Students will be exposed to symbolic and numerical computation, simulation algorithms, data analysis, and visualization. Students are encouraged to use the oppornity to extend their thesis research.

## Keywords

Materials Science, Computation, Data Exploration, Visualization, Symbolic and Numerical Calculations.

## Assessment methods

Oral exam
