

PHYS-632

**Fusion and industrial plasma technologies**

Baquero Ruiz Marcelo, Decker Joan, Hogge Jean-Philippe, Martin Yves, Nes Thomas Henricus, Pouchon Manuel A., Reimerdes Holger, Sedlák Kamil, Siravo Ugo

Cursus	Sem.	Type
Advanced Manufacturing		Opt.
Physics		Opt.

Language of teaching	English
Credits	4
Session	
Exam	Oral
Workload	120h
<b>Hours</b>	<b>56</b>
Courses	28
Exercises	28
<b>Number of positions</b>	

**Frequency**

Every 2 years

**Remark**

Next time: Spring 2025

**Summary**

The course provides an overview of the technologies that are essential for fusion developments and for industrial plasma applications, highlighting the synergies between the two fields. The aim is to provide a combined theoretical and experimental background to the various topics.

**Content**

The various topics also include vacuum technologies, cryogenics, high current and voltage systems, materials for fusion, superconducting magnets, control and data acquisition, electrical arcs, mm-wave systems, plasma fuelling and the tritium cycle in fusion reactors.

The course will consist of three parts:

1. Common aspects of fusion and industrial plasma technologies
  - Vacuum technologies; Cryogenics; Electrical arcs; High current and voltage systems (3 lectures)
2. Specific fusion aspects
  - Control and data acquisition (1 lectures)
  - mm-wave systems (2 lectures)
  - Plasma fuelling and tritium cycle (1 lecture)
  - Materials for fusion (1 lecture)
  - Superconducting magnets for fusion (3 lectures)
3. Specific industrial plasma applications techniques (2 lectures)

**Learning Prerequisites****Required courses**

The introductory plasma physics and fusion courses are a pre-requisite.
