

MSE-660(b)

## Limestone-Calcined Clay - Cement : Characterisation methods (SPRING)

Scrivener Karen, Various lecturers , Zunino Franco

Cursus	Sem.	Type
Materials Science and Engineering		Opt.

Language of teaching	English
Credits	2
Session	
Exam	
Workload	60h
<b>Hours</b>	<b>28</b>
Lecture	20
Practical work	8
<b>Number of positions</b>	<b>40</b>

### Frequency

Every year

### Remark

Next time: February 10 to 13, 2025

### Summary

Le but est de former doctorants et post doctorants aux méthodes de caractérisation des ciments composés comme la microstructure, la diffraction des rayons X, la calorimétrie, la formulation et la durabilité dans le cadre des actions internationales du project LC3 financé par la DDC.

### Content

#### I ) Hydration of cements ( 4hours)

- A) Context why we need SCMs and calcined clays in particular
- B) Clay structure, why kaolinite, calcination temperature and methods, reactivity
- C) Back to hydration, the products
- D) Kinetics and mechanisms
- E) Practical work : calorimetry (2h)
- F) Practical work : SEM + samples preparation (4h)

#### II) XRD for cementitious materials ( 2-3hours)

- A) Introduction to XRD for cement
- B) Quantitative analysis using Rietveld
- C) Practical work : XRD (2h)

#### I ) Mechanical behaviour of cements (2 hours)

- A) Creep
- B) Shrinkage

#### III) Characterisation of microstructure (2h)

- A) Scanning electron microscopy
- B) Mercury Intrusion Porosimetry
- C) Proton NMR

#### IV) Rheology and mix design (2-3h)

- A) Basic of rheology
- B) Particle size distribution + Specific surface
- C) Concrete design

#### V) Durability (4h)

- A) Carbonation
- B) Sulfate attack
- C) Chloride resistance
- D) Alkali silica reaction

### Assessment methods

Written
